

Figure 1 consists of two line graphs side-by-side. The left graph is for the 'same' condition and the right graph is for the 'different' condition. Both graphs plot 'Percentage of correct responses' on the y-axis (ranging from 60 to 100) against 'Time (ms)' on the x-axis (ranging from 0 to 1000). In both conditions, the percentage of correct responses starts at approximately 85% at 100ms, dips to about 75% at 200ms, and then gradually declines to around 65% at 1000ms. The 'different' condition shows slightly higher percentages than the 'same' condition at most time points.
